

Bhimpur Local Oil Economy Revival Mission

A data-led business case from 25 tribal villages, Bhimpur Block, Betul (MP) – Year 2025-26

Dialogue → Land Allocation → Collective Action → Enterprise Hub

Green Chakra Private Limited × Pragati Grameen Vikas Sanstha

Pramel Kumar Gupta, www.greenchakra.in

1. Baseline: the 25-village canvas

A grounded picture of households, population and cropping economy

25

Tribal villages
covered

6,630

Households

34,024

Population

2025-26

Production year

This is not only crop data. It is a local economy baseline showing how food, oil, soil and cash flows have changed in remote tribal villages.

Community consultations confirmed a major shift: local oilseed production has reduced and market-purchased packed oil dependency has increased across households.

2. Crop production is dominated by maize

Total production in quintals, 25 villages

Maize alone accounts for roughly 69% of recorded production. This confirms a strong monocropping tendency in the landscape.

Mahua gulli and flowers are each 16,082 qtl – a major local resource, but value addition is currently weak without village-level processing.

Kutki remains an important traditional millet crop. It can become a second processing opportunity for the Bhandwa Enterprise Hub.

3. Traditional oilseed crops have become marginal

Jagni, mustard and til together are far below Mahua gulli

Mahua gulli is about 14× the combined production of jagni + mustard + til.

This baseline validates the community observation: the traditional village oilseed basket has collapsed, while Mahua remains the strongest local oil resource.

GCPL and PGVS have therefore started with two linked entry points: Jagni revival and Mahua gulli processing.

4. The money drain: edible oil dependency

Packed oil purchases now pull cash out of the village economy

₹6.63 Cr

Minimum annual outflow
@ ₹10,000/HH/year

₹9.95 Cr

Likely mid-point
@ ₹15,000/HH/year

₹13.26 Cr

Upper estimate
@ ₹20,000/HH/year

**Rural cash → outside
market**

Every year, ₹6-13 crore may be leaving these 25 villages for edible oil purchase. Even partially localizing this value chain can create a major village enterprise opportunity.

5. Community diagnosis: why the local oil economy weakened

The issue is not only production – it is missing processing infrastructure

1

Oilseed area declined

Jagni, til, mustard and groundnut reduced over time

2

Processing gap

One expeller dependence in Chicholi; 20 km away

GRE machine demonstration became a turning point: farmers moved from asking about the problem to imagining a village processing business.

3

Unfair value capture

Uncertain oil recovery and khali often not returned

4

Market dependence

Packed oil replaced local oil in household consumption

6. Green Chakra response: rebuild the value chain

From crop revival to village enterprise infrastructure

The ₹6.0 lakh investment is not only for a machine or shed. It is seed capital for confidence, conviction and business infrastructure in a remote tribal village.

7. Catalytic Investment in a Village

Enterprise Hub

Building the Foundation for a Community-Owned Regenerative Enterprise Ecosystem

₹6 lakh today → Community-owned enterprise ecosystem tomorrow

GCPL investment in Bhandwa Village Enterprise Hub

If even 5-10% of the oil value chain is localized, it can generate strong recurring revenue and trust in the enterprise hub.

Potential annual oil spend outflow

The investment also creates a visible signal to local youth: business can be built in the village, with the village, for the village.

8. From SoTH to enterprise hub

A rapid community action timeline

The speed of mobilization – from community demand to land allocation to tin shed construction – shows that the idea has local ownership, not just external project push.

9. Youth mobilization is the real asset

The hub is a vehicle to build conviction, skills and accountability

Business curiosity

Local youth asking: when will the oil unit start?

Hands-on learning

Machine, materials, construction and operations become live training.

Enterprise discipline

Records, payments, quality, procurement and local sales.

VLE pipeline

Future Green Chakra Champions and village entrepreneurs.

Prime interest: mobilize tribal/indigenous youth and give them confidence to create businesses from local natural resources.

10. Enterprise architecture: oil, soil and services

Bhandwa as an entry hub for a larger Bhimpur platform

Input side

Mahua gulli • Jagni seed • Millet crops •
Local biomass

Processing side

Oil expeller • Khali recovery •
Millet/oilseed services

Soil side

Green Chakra Mahua Gold™ through BRC
network

Market side

Local oil • Farm inputs • GCC/VLE service
network

**Local resources → Local processing → Local jobs → Local
soil recovery**

11. What success should look like in 12 months

Early milestones for forums, partners and community investors

400

Jagni seed plot demonstrations

1

Operational Bhandwa oil expeller
hub

4

BRC-based Mahua Gold™ units

2,000

30 kg bags soil conditioner
planned

100

Emerging VLE/GCC network target

₹6–13 Cr

Annual oil outflow opportunity
addressed

The next phase needs working capital, team accountability and youth enterprise support. The platform has moved from idea to infrastructure; now it needs scale discipline.

12. Discussion points for partners

What GCPL is seeking to strengthen next

Working capital

Support BRC production cycles, local procurement and inventory.

VLE business lead

One accountable person to build and track village enterprise performance.

Demonstration support

Jagni revival, Mahua oil trials, Mahua Gold™ field results.

Quality systems

Testing, packaging, records, and transparent community accounting.

The core proposition

Invest in the village enterprise ecosystem – not just a unit – so tribal youth can build businesses around oil, soil and local natural resources.
