

REZ Process Map

Overview

This process map outlines the full REZ journey – how it is seeded, shaped, and activated across a sequence of phases. It serves as a working reference to guide implementation while allowing phases to overlap and adapt to context.

Who Is This Process Map For & Why?

This process map is intended for implementation teams, local partners, and institutional bodies responsible for anchoring and describing the REZ process. It serves as a shared guide to coordinate work, coordinate stakeholders, and monitor delivery across multiple phase outputs.

It serves to make the REZ process concrete – the things that happen, when, where, and what must be facilitated programming – while allowing flexibility across contextual adaptation.

What This Map Shows

The map equates the full REZ journey across five overarching phases: Seeding & Planning and the Implementation Arc. Together, these arcs represent the progression from community-led direction setting to sustained institutional stewardship.

Each phase contains the following components:

- 01 Phase & Purpose**
Each phase represents a distinct stage in the REZ journey. The purpose clarifies what the phase is meant to achieve before moving forward.
- 02 Community & Institutional Engagement Activities**
These are activities carried out with community and institutional partners, including individuals and formal bodies such as CSOs, NGOs, and other stakeholders. These activities are designed to build trust, establish relationships, and ensure community-led ownership.
- 03 Internal Enabling Activities**
These are supporting activities undertaken by the anchor institution or institutions to ensure the REZ process is effectively implemented. These may include internal planning, coordination, design, compliance, and system setup.
- 04 Phase Transition Criteria**
These are internal conditions that signal readiness to move forward. They are not external full completion. Instead, they signal what must be true for the next set of activities within the ongoing work to be possible.
- 05 Phase Outputs**
Each phase generates tangible outputs – both in terms of institutional structures, documented systems, or operational mechanisms. These outputs are the result of internal enabling activities and community engagement.
- 06 Supporting Resources**
These include templates, tools, reference materials, and frameworks that guide implementation within the phase.

How to Read This Process Map
Read the map from left to right to follow the overall flow of the REZ journey across phases. Phase 0 is the starting point. The map is designed to be read from left to right, with the flow of the REZ journey across phases. Phase 0 is the starting point. The map is designed to be read from left to right, with the flow of the REZ journey across phases.

Understanding an Activity Card

When to Use It

This map should be used at the outset of engagement to orient teams and partners to the full REZ journey. It supports planning and sequencing of work across and across phases, and helps teams understand how activities connect and build over time. It is also a tool for progress tracking – enabling teams to assess readiness to progress without requiring full completion of one activity within a phase. Because phases overlap, the map should be used as a reference guide, not a rigid checklist.

Seeding & Plan (Community-Led Direction Setting) - To ground REZ in community aspirations and local institutional realities, culminating in a shared strategic direction and collective commitment to move forward.

Implementation Arc - To operationalise agreed priorities by building institutional capability, embedding governance systems, and progressively transitioning stewardship to local institutions.
